Ring sizer

Print at Actual size or 100%, then check the square before you cut anything.

1. **Check the square.** Each side should measure 50 mm. If it doesn't, print again at Actual size or 100%.
2. **Cut out a strip.** Cut along its outline and cut the slit at its wide end with a craft knife.
3. **Wrap it.** Wrap the strip around the base of your finger, numbers outward, and push the narrow end through the slit.
4. **Read your size.** Pull it snug but loose enough to slide over the knuckle. Your size is the mark at the slit.
5. **Or use a ring that fits.** Lay it on the circles below: your size is the circle whose line just shows inside the ring.

50 mm

on each side

Lay a ring that fits on these circles
